

SWU has implemented an **encrypted wireless network** named **SWU_Secure**. The SWU_Secure encrypted network increases privacy of network communications:

The new wireless network is called: **SWU_Secure**
The SSID password to the network is: **Warriors**

Once connected a prompt will ask for your username and password. Enter your full SWU email address as the username and the same password that you use to check your SWU email. If you don't have a SWU email address follow on screen instructions for guest access.

If you have not already installed SafeConnect, then you will be prompted to download SafeConnect at this time.
